

## CLAIMS

What is claimed is:

1. An isolated nucleic acid fragment comprising a nucleotide sequence selected from the group consisting of (a) a nucleotide sequence corresponding to any of the  
5 nucleotide sequences set forth in SEQ ID NOS:1, 3, 5, 7 or 9 or the complement thereof, or (b) the nucleotide sequence of (a) wherein said sequence is degenerate in accordance with the degeneracy of the genetic code.
2. An isolated nucleic acid fragment comprising:
  - (a) the first nucleic acid fragment of Claim 1, and
  - 10 (b) a second nucleic acid fragment encoding a plant cystathionine  $\gamma$ -synthase or a functionally equivalent subfragment thereof.
3. A chimeric gene comprising the isolated nucleic acid fragment of 1 operably linked to a regulatory sequence.
4. A nucleic acid fragment comprising
  - 15 (a) the chimeric gene of claim 3, and
  - (b) a second chimeric gene comprising a nucleic acid fragment encoding a plant cystathionine  $\gamma$ -synthase or a functionally equivalent subfragment thereof or a complement thereof operably linked to a regulatory sequence.
5. A plant comprising in its genome the chimeric gene of Claim 3 or the nucleic  
20 acid fragment of Claim 4.
6. Seeds derived from the plant of Claim 5.
7. A transformed host cell comprising the chimeric gene of Claim 3 or the nucleic acid fragment of Claim 4.
8. The transformed host cell of Claim 7 wherein said host cell is selected from the  
25 group consisting of a plant cell and a microbial cell.
9. A polypeptide comprising all or a substantial portion of the amino acid sequence set forth in SEQ ID NOS:2, 4, 6, 8 and 10.
10. A method for increasing methionine content of the seeds of plants comprising:
  - (a) transforming plant cells with the chimeric gene of Claim 3 or the nucleic  
30 acid fragment of Claim 4;
  - (b) growing fertile mature plants from the untransformed plant cells obtained from step (a) under conditions suitable to obtain seeds; and
  - selecting progeny seed of step (b) for those seeds containing increased levels of methionine compared to untransformed seeds.
- 35 11. A method for producing plant methionine synthase comprising:
  - (a) transforming host cells with the chimeric gene of Claim 3 or the nucleic acid fragment of Claim 4;
